PROFESSIONAL SUMMARY

Software Developer with hands-on experience building internal web and mobile applications using AI-augmented development workflows. Proficient in designing, integrating, and shipping tools using React, TypeScript, and modern JavaScript — from offline-capable Progressive Web Apps with IndexedDB persistence to cross-platform Android browsers with React Native. Skilled in accelerating development using AI models including Claude, ChatGPT, Codex, and Gemini for code generation, prototyping, architecture decisions, and iterative refinement. Collaborative team player who works closely with seniors, testers, and leadership to deliver quality software.

WORK EXPERIENCE

Associate Developer

August 2025 – Present

Techsapphire Solutions, Panchkula, India

- Design, prototype, and ship features for internal tools and proof-of-concept applications using AI-augmented workflows in React and TypeScript.
- Build offline-capable web utilities for media recording and data processing using React and modern browser APIs including MediaRecorder and Service Workers.
- Develop and maintain a cross-platform Android browser with React Native, integrating Bluetooth and network thermal printer communication, tabbed session persistence, and a WebView-to-native bridge.
- Architect an offline-first internal PWA for document management and annotation, featuring IndexedDB persistence across 13 data stores, Google Gemini AI-powered classification, Tesseract.js OCR, and a custom binary backup format (CCBK) with streaming gzip compression.
- Collaborate daily with testers to validate functionality, discuss bugs, brainstorm solutions with AI tools, and report progress to senior leadership.
- Leverage AI models strategically — Claude for architecture and implementation, ChatGPT and Gemini for brainstorming and research, Codex for scaffolding, and AI Studio for design exploration.

Software Development Intern

April 2024 – September 2024

Techsapphire Solutions, Panchkula, India

- Developed and tested prompt-engineering patterns for LLMs to generate task-specific outputs for internal tooling.
- Built frontend prototypes using HTML, CSS, and JavaScript for internal tool evaluation and feature validation.
- Set up containerized development environments using Docker and wrote SQL queries for PostgreSQL-based internal data workflows.
- Debugged and improved internal .NET applications, contributing fixes and enhancements under code review.
- Gained foundational experience with C#, .NET, and SQL that informed later full-stack development work.

Environmental Health and Safety (Co-op)

September 2023 – April 2024

AP Plasman, Windsor, Ontario, Canada

- Performed user-side testing of a new EHS platform, validating data accuracy, reliability, and usability before production rollout.
- Logged defects and edge cases and provided actionable recommendations on system trustworthiness for production use.
- Built a beta internal dashboard using React and TypeScript to digitize machine health checklists and inspection workflows.
- Implemented role-based access control so admins could monitor overall equipment activity while employees updated status for assigned machines.
- Formed strong working relationships with cross-functional teams including operators, supervisors, and IT staff.

SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, SQL

Familiar With: Java, C++, Python, C#

Frameworks: React, React Native, Node.js

Databases: IndexedDB, SQLite, PostgreSQL

AI-Assisted Development: Anthropic Claude, OpenAI ChatGPT, Google Gemini, Google AI Studio, OpenAI Codex, Antigravity

Concepts: PWA, Offline-first Architecture, REST APIs, Service Workers, OOP, Agile, SDLC

Dev Tools: VS Code, Git, Docker, Vite, Electron, Gradle

EDUCATION

B.Sc. Computer Science (General) — University of Windsor, Windsor, Canada

2022 – April 2025

Co-operative Education Program | Good Standing | All degree requirements met

Relevant Coursework: Data Structures & Algorithms, Operating Systems Fundamentals, Database Management Systems, Object-Oriented Software Analysis & Design, System Programming, Object-Oriented Programming (Java), Computer Architecture, Computer Networks, Algorithms & Programming I/II, Statistics

PROJECTS

Cognitive Canvas *[React 19, TypeScript, Zustand, IndexedDB, Google Gemini AI, Vite, Tesseract.js]*

- Offline-first Progressive Web App for document management and workspace annotation, designed for deep reading and knowledge management.
- Features an infinite pannable/zoomable canvas workspace with 8+ item types including notes, freehand ink, audio/video recordings, and mind maps.
- Integrated Google Gemini AI for automatic document classification, multi-note summarization, and smart note splitting.
- Built Tesseract.js OCR integration for scanning and digitizing physical documents directly in the browser.
- Designed a custom binary backup format (CCBK) with streaming gzip compression and GitHub-based cloud sync.
- Implemented IndexedDB persistence across 13 object stores with complex schema migrations, full-text search, and keyword extraction.

Custom Android Browser *[React Native, TypeScript, Bluetooth API, TCP Sockets, AsyncStorage]*

- Feature-rich Android browser built with React Native with tabbed browsing and full session persistence across app restarts.
- Integrated Bluetooth thermal printer communication with Arabic RTL text support and network printer support via TCP/IP sockets.
- Built a WebView-to-native communication bridge enabling JavaScript-to-native feature access for printing, file management, and GitHub API integration.
- Implemented credential manager for domain-specific logins, bookmarks, edge swipe navigation, incognito mode, and desktop mode toggle.

Offline Media Recorder *[React, MediaRecorder API, PWA]*

- Browser-based tool for recording screen and audio locally with zero server dependency.
- Exports MP4 recordings for demos and training, leveraging the MediaRecorder API and Blob handling.

EHS Machine Inspection Dashboard *[React, TypeScript]*

- Beta internal dashboard to digitize machine health checklists and equipment inspection workflows.
- Implemented role-based access control allowing admins to monitor overall equipment activity while employees log inspection data for assigned machines.

Offline Nutrition Calculator *[JavaScript, JSON]*

- Web app that calculates macronutrients from JSON-based food data per 100g, targeted at fitness and diet tracking.

E-commerce Platform *[HTML, CSS, JavaScript, Python]*

- Led the development of a comprehensive e-commerce website handling inventory, orders, subscriptions, and finances.
- Implemented front-end with HTML, CSS, and JavaScript; back-end powered by Python.
- Conducted thorough testing and debugging to deliver a user-friendly and secure platform.

Passenger Management System *[SQL, HTML, CSS, JavaScript]*

- Developed a passenger ticket management system using SQL for data storage including price, departure, destination, timings, and duration.
- Built the user interface with HTML/CSS and back-end logic with JavaScript, collaborating with a team for seamless integration.

YouTube Clone *[HTML, CSS]*

- Static recreation of the YouTube UI using CSS Grid for responsive video thumbnails, Flexbox for header layout, and hover effects for interactivity.

Print Feature Demo *[JavaScript, Web APIs]*

- Prototype exploring browser print workflows and controlling print layout/output from web applications.

PATENTS & ACHIEVEMENTS

Design Patents

- Obtained design patents for two innovative products: "Adjustable Mask" and "Movable Steering Design."
- Demonstrated problem-solving skills and attention to detail throughout the patent application process.

Utility Patent

- Secured a utility patent for "System for Tracking Expiration Date of Food Products in a Refrigerator."
- Developed a sensor-based solution to prevent food wastage and optimize refrigerator shelf life.

Research Contribution

- Contributed to healthcare research projects in collaboration with faculty members at Chitkara University.
- Played a key role in outlining the website for the "PregAura" healthcare project.
- Engaged in discussions with Manchester Metropolitan University (UK) for an industrial project, demonstrating cross-border collaboration.

AI-ASSISTED DEVELOPMENT WORKFLOW

I leverage AI models strategically across the development lifecycle to accelerate delivery while maintaining architectural control:

- Claude — Primary tool for architecture decisions, full implementation, debugging, and code review.
- ChatGPT & Google Gemini — Brainstorming, idea exploration, research, and general-purpose problem solving.
- OpenAI Codex — Code scaffolding, boilerplate generation, and rapid prototyping.
- Google AI Studio — Design exploration, UI iteration, and visual layout prototyping.
- Antigravity — Full-stack prototyping combining design and functionality.

CERTIFICATIONS

- **Google Project Management (Jul 2023)** – Planning, risk management, scheduling, stakeholder communication
- **Cisco Network Academy Cybersecurity (Jan 2021)** – Network security fundamentals, threat detection, security protocols
- **Worker Health and Safety Awareness (Nov 2022)** – Ontario workplace safety standards — relevant to AP Plasman co-op role
- **Machine Learning Specialization (In Progress)** – Supervised/unsupervised learning, model evaluation, ML workflows
